

## SECURE-DR

### **Real Time Hardware independent Business Continuity and Disaster Recovery services.**

**Gartner estimates that two out of five enterprises that experiences a disaster will go out of business in five years.**

**Enterprises can improve these odds, but only if they take the necessary measures before and after the disaster.**

**Source Gartner, Inc.**

### **Disaster Recovery with a Security Focus**

Disaster means different things to many people. What is common is the impact a disaster can have on your organisation. Loss of revenue, Loss of customers, Loss of data and in some cases loss of your business are the results a major outage can have on your business.

For most however disaster recovery may seem like an unnecessary cost to the business – “it will never happen to us so why pay for something we will never use”. For others it is an essential requirement but something that you wish could be easier to mitigate against and plan for.

IPOptions SECURE-DR offers every organisation no matter how big or small the ability both recover from a disaster and get value for money from whatever budget you have available.

The SECURE-DR solution differs from other solutions available on the market because it not only encompasses the requirements to recover quickly from a major issue but also to ensure that security is maintained in your DR setup to the same or better level that you have on your main corporate LAN.

SECURE-DR uses Virtualisation technology to ensure that your disaster recovery infrastructure is hardware independent. In addition required “currentness” of data can be ensured up to an including real time replication between the main site and DR site.

SECURE-DR also ensures that your DR site can be securely directly connected to your site and in the event of a single system failure on your main site the equivalent system at your DR site can be brought online.

## SECURE-DR: Your Disaster Recovery Questions Answered.

Our unique blend of diverse IT, security and business continuity backgrounds give us the ability to address the disaster recovery issues of your network from all sides.

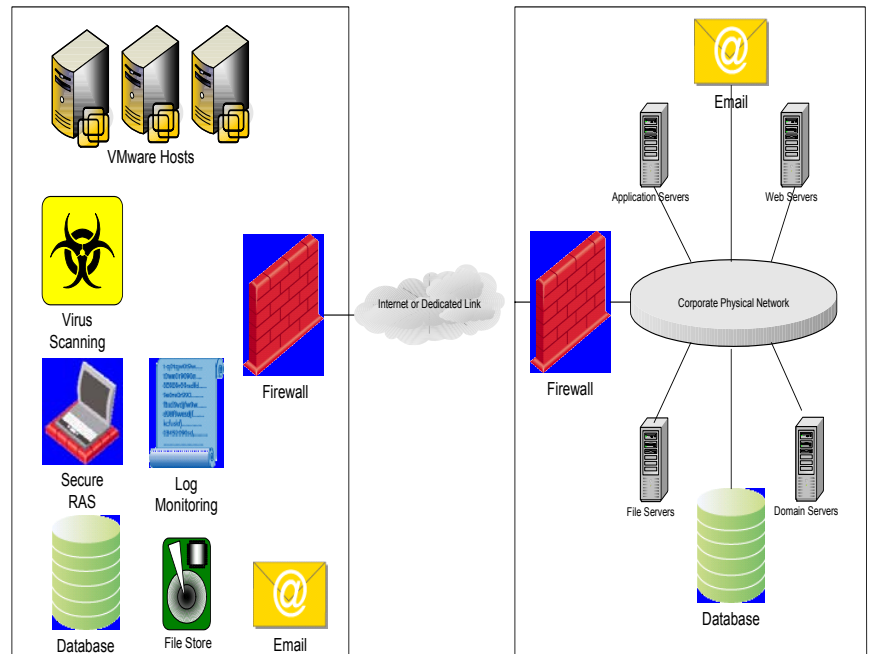

We take a business approach to DR, looking at what is fiscally prudent and what makes sense from a technical perspective.

In addition as a technically focused security provider we ensure that every step and stage of solution delivery is completed by expert engineers and consultants. This ensures that we deliver sustainable scalable solutions.

Our deployment planning process ensures that all of the requirements to recover your mission critical components are taken into account.
